### DSN Group 9-Month 2016 Results Update

DSN Group is a growing, and green, producer of palm oil and wood products sold into global markets.

Our plantation operations are among the most productive in the sector.

The DSN Group was established in 1980, originally operating in logging and wood products manufacturing. We diversified into the plantation sector in 1997, building upon our strong relationships within our local communities.

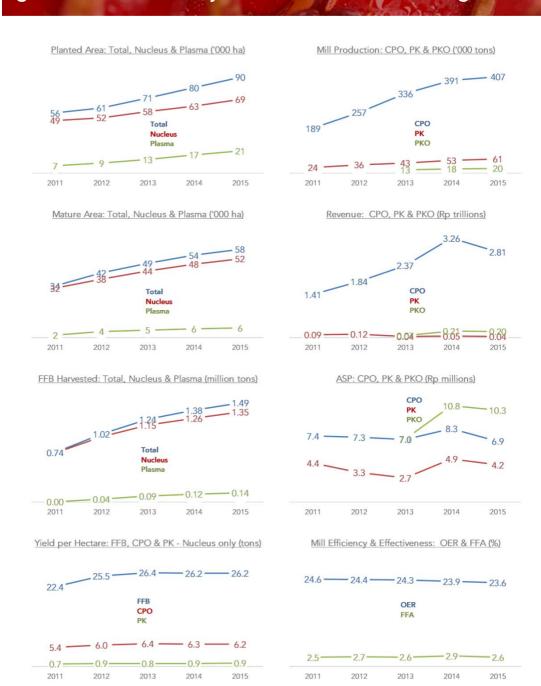

The palm oil business has seen higher growth in the past several years, and accounted for 69% of our total revenue in 2015, down somewhat from the year before due to lower CPO prices.

Our expansion has accelerated in recent years, with the acquisition of ten new oil palm estates since 2010, and two in the past year.

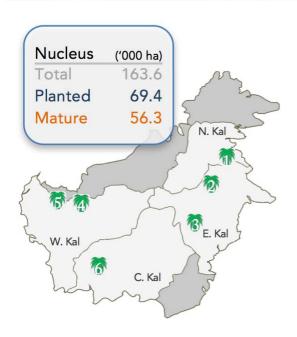

In 2016, we also took a strategic minority stake of 15% in REA Kaltim, a subsidiary of UK-listed R.E.A. Holdings plc, REA Kaltim has more than 40,000 planted hectares, with a sizeable landbank.

We also formed a JV with Daiken Corporation of Japan, to expand our wood products activities, These transactions provide long-term opportunities for expansion in both of our core businesses.

### Our plantations five-year track record highlights strong growth and consistently effective and efficient management

### Our estates are clustered across East, West and Central Kalimantan, with acquisitions AAN & MNS in the West

DSN acquired two estates in 2015 - partially planted AAN and greenfield MNS. In 2016, we also took a strategic minority stake in REA Kaltim

By the end of Q3, we had 69,368 ha of planted nucleus, with 56,279 ha mature, and average ages of 8.5 and 10.0 years respectively.

Due to the lingering impact of the recent El Nino, our FFB yield was 11.4 tons/ha for the first nine months of 2016.

We have 94,000ha available landbank, largely in W. Kalimantan.

## Our planted area has grown by acquisition and planting since 2001, resulting in a relatively young age profile

Acquiring AAN in 2015 provided nearly 1,900 ha of nucleus and 800 ha of plasma, of which 1,200 ha were mature.

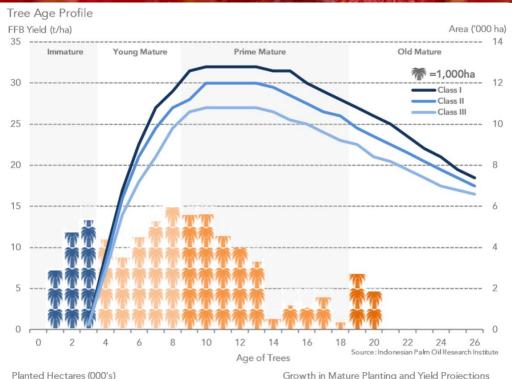

The strategic stake in REA Kaltim could expand to 49% over the next 5 years, and provide us access to existing and prospective estates totaling some

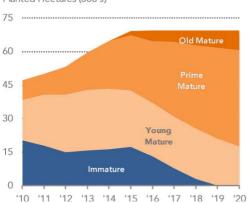

Our commitment to plasma holders is a critical element in the success of DSN's palm oil activities, often easing title conversion, and the prospect of social disturbances.

Our plasma area spans 20,920 ha at the end of H1, or 30% of our planted area. DSN manages 17,914 ha under a BoT model, resulting in higher yields and revenues for plasma holders, while DSN benefits from milling margins.

70,000 hectares.

# Our planting and age profile to date suggests an average 10% annual growth in FFB production through 2018

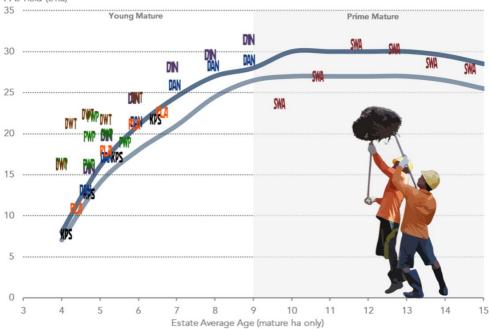

na	lard FFB/	Stand	ea			
% Δ	Class III	Class II	vg Age	% Δ	'000 ha	Year-End
	18.5	20.9	7.5		26.7	2010
3	19.0	21.5	7.7	21	32.3	2011
3	19.5	21.9	8.0	19	38.4	2012
4	20.3	22.8	8.4	14	43.7	2013
4	21.2	23.7	8.9	8	47.3	2014
4	22.1	24.7	9.5	9	51.8	2015
2	22.4	25.0	10.0	9	56.3	2016
0	22.4	24.9	10.3	10	61.7	2017
1	22.5	25.1	10.8	8	66.4	2018
2	22.9	25.6	11.5	4	69.4	2019
4	23.8	26.5	12.5	0	69.4	2020

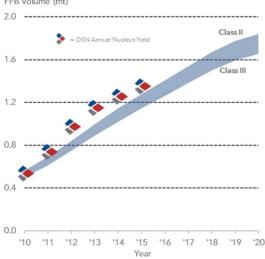

Our planted areas mature by 2019. Yield expansion of the Young Mature trees should offset the decline in Old Mature trees, with a standard FFB yield as high as 26.5 tons/ha (Class II soil) in 2020, up from a standard yield of 24.7 tons/ha in 2015.

# Our younger estates have achieved or exceeded the standard yields for Class II soil over a number of years

The El Nino of 2015 continues to have a negative impact on productivity through 2016. While 2017 should show a modest recovery, normal estate yields likely won't return until 2018.

Our mature area will increase from 56,279 ha in 2016 to 69,368 ha by 2019 based on the area already planted, with a prospective Class II soil yield of 1.84 million tons FFB in 2020.

## The adverse weather in 2015 has resulted in nucleus volumes declining in Q3 by 47% from the previous year

#### Monthly FFB Production, Nucleus Estates

#### Monthly FFB Production, Plasma Estates

	2014	1,635	18	
	2013	1,381	31	

\*Fully Operated Only

In Q3, DSN produced 184.6 thousand tons FFB from nucleus estates, with an additional 22.1 thousand tons from plasma.

Nucleus FFB output declined by 47.1% from Q3 2015, with a nucleus yield of 3.3 tons per hectare and a plasma yield of 2.5 tons per hectare in the quarter.

3<sup>rd</sup> party purchases were reduced by 24% in Q3 as well. In all, FFB processed fell by 43.5% to 247.2 thousand tons.

### Our most developed cluster - with 5 estates, 5 CPO Mills and 56,000 ha - is nearly the size of Singapore

71% of our planted area is located in a contiguous block in East Kalimantan – roughly the size of Singapore.

5 of our palm oil mills are located within these estates, with a 6<sup>th</sup> – Mill 7 – expected to come on line later this year. This infrastructure supports an 8-hour standard for harvest-to-mill, resulting lower

FFB spoilage and lower FFA.

Each mill's capacity can accommodate peak output from a 10,000 ha estate, while mills servicing developing estates (such as PWP) may purchase external FFB.

At a cost of roughly \$18 - \$20 million per mill, this adds \$2,000 to development costs per hectare.

CPO mill capacity designed for peak production

					Tons/	Max.		

We are a member of the Roundtable on Sustainable Palm Oil (RSPO), and strive to comply with global RSPO and the Indonesian Sustainable Palm Oil (ISPO) principles.

We have received RSPO certification for our SWA, DAN and DIN palm oil plantations along with their respective mills, and have ISPO certification for Mills 1, 2 and 3. We have also received ISCC certification for Mills 3 and 4, facilitating sales of our CPO for European biofuels.

We remain committed to protecting our environment as well. We have set aside 3,250 hectares, or an area roughly equivalent to 5% of our total planted area, for conservation purposes.

## Lower FFB production and a slight decline in OER led to a sharp drop in CPO output, with strong FFA performance

Production P	erformance	e - Mills			
	Period	Volume	%∆	Yld (%) F	FA (%)
CPO	Q3 2016	59	-44.2	23.9	2.69
('000t, OER)	Q3 2015	106	-	24.2	2.65
	2015	407	4.2	23.6	2.57
	2014	391	16.4	23.9	2.93
	2013	336	30.6	24.3	2.65
PK	Q3 2016	10.3	-34	4.2	
('000 t, KER)	Q3 2015	15.6	-	4.0	
	2015	60.6	14	3.6	
	2014	53.3	23	3.5	
	2013	43.3	21	3.3	
PKO	Q3 2016	3.4	-39	40.9	
('000 t, PKOER)	Q3 2015	5.6	-	38.9	
	2015	20.5	13	40.4	
	2014	18.2	35	41.8	
	2013	13.5		42.4	

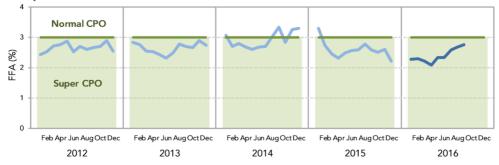

CPO production contracted by 44.2% in Q3 2016, while the Oil Extraction Rate (OER) contracted slightly to 23.9% for the quarter.

Palm Kernel production fell by 33.9% to 10,331 tons, with most of the output used by our Palm Kernel Oil mill which produced 3,396 tons of PKO.

#### Monthly CPO Production

#### Monthly FFA Levels

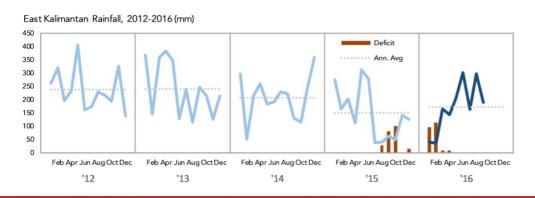

Our CPO production quality remained high during the year, with aggregate FFA levels of just 2.69% for the quarter. The maximum monthly FFA level from our own production was just 2.78% in Q3. 76.9% of our East Kalimantan output was again sold with FFA below 3% during the quarter.

## DSN's productivity, at 6.2 tons of CPO per hectare in 2015, is consistently ahead of peers, whatever the age profile

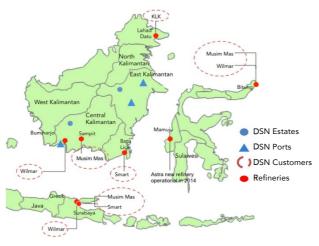

While FFB yields were stable in 2015 at 26.2 tons per hectare, Q3 2016 witnessed a decline of 52.1% year-on-year.

This was largely driven by the extremely dry conditions in H2 of 2015 and Q1 2016. Water deficits in our East Kalimantan estates only began to ease in Q2, with above-average rainfall in June, for the first time in 12 months.

### Expanding domestic refining capacity, coupled with our high-quality product, ensures robust demand for our CPO

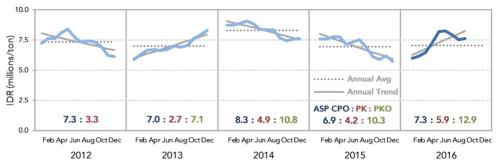

Sales Performance		Volum	е	ASP	Revenue

In Q3 2016, we sold 65.7 thousand tons of CPO, at an average selling price of Rp7.68 million per ton. Pricing has continued to recover from 2015 lows, with the ASP in Q3 higher by 12.7% from the previous year, while volume was off by 33.5%.

Pricing for Palm Kernel (PK) jumped by 97.2%, while Palm Kernel Oil (PKO) was higher by 56.5% from Q3 2015.

In order to meet our annual volume commitments to our primary customers, we have also engaged in limited CPO trading, totaling 23 thousand tons through Q3 at an average purchase price of Rp7.47 million per ton.

#### Monthly ASP, CPO

## Costs were lower during the year, and the seasonality of fertilizer application led to expanding margins in Q4

Cost of Sales (IDR bn)	2015	2014	2013	2012	2011

Cash costs per mature hectare improved by nearly 5% to Rp20.9 million.

Our total cash cost declined by Rp113 billion in 2015, on falling FFB purchases and Other expenses.

We produced CPO at a cash cost of Rp4.16 million per ton, for a 10% improvement over 2014. Excluding the costs of purphasing and milling 2<sup>rd</sup>

purchasing and milling 3<sup>rd</sup> party FFB, our cost per ton was just Rp3.64 million.

If we also net off the revenues derived from the sale of FFB, Palm Kernel and Palm Kernel Oil, our cash cost per ton declines further, to Rp3.0 million, consistent with the previous two years.

### DSN is also a leading wood products manufacturer with reputable brand names & long-standing client relationships

We are the 4<sup>th</sup> largest wood products manufacturer in Indonesia, producing panels, engineered floors and doors.

Recent acquisitions and our JV with Daiken Corporation will shift our product mix into higher margin engineered flooring and doors.

We have sufficient capacity to meet our current growth plans, but will be enhancing our efficiency by consolidating operations from Surabaya and Gresik to a new processing plant in Lumajang by 2015, thereby reducing our transportation costs.

We comply with numerous international environmental standards, and seek to ensure that all logs and sawn timber purchased for our operations are sourced from sustainable forest resources.

DISCLAIMER: This presentation may contain forward-looking statements that involve risks and uncertainties. Actual future performance, outcomes and results may differ materially from those expressed in forward-looking statements as a result of a number of risks, uncertainties and assumptions. Although the Company believes that such forward-looking statements are based on reasonable assumptions, it can give no assurance that such expectations will be met. You are cautioned not to place undue reliance on these forward looking statements, which are based on the current view of the management on future events.

Unless otherwise stated, the Company is the source for all data contained in this presentation. Such data is provided as at the date of this presentation and is subject to change without notice. No reliance may be placed for any purposes whatsoever on the information contained in this presentation, or any other material discussed at the presentation, or on the completeness, accuracy or fairness thereof.

The information in this presentation has not been independently verified. No representation, warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness or correctness of the information and opinions in this presentation. None of the Company or any of its agents or advisers, or any of their respective affiliates, advisers or representatives, undertake to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise and none of them shall have any liability (in negligence or otherwise) for any loss howsoever arising from any use of this presentation or its contents or otherwise arising in connection with this presentation.

This presentation also contains certain statistical data and analyses which have been prepared by the Company and/or other sources. Numerous assumptions were used in preparing the Statistical Information, which assumptions may or may not appear herein. As such, no assurance can be given as to the Statistical Information's accuracy, appropriateness or completeness in any particular context, nor as to whether the Statistical Information and/or the assumptions upon which they are based reflect present market conditions or future market performance.
