Power of the Young

Long-term catalyst: favorable age profile

DSNG plantation profile currently consists of prime-aged trees, at an average of 11 years of age (vs. AALI and LSIP at 15 and 17 years old, respectively). Company also produces superior FFB yield as compared to peers, at 25.4MT/ha last year (vs. AALI at 19.5MT/ha and LSIP at 17.1MT/ha); we therefore project DSNG FFB production to grow at 7.4% CAGR between FY19-22F (vs. AALI and LSIP at 3.6% and 3.0%, respectively). Given better productivity, Company will have a stronger opportunity to monetize structurally favorable CPO price level, over the long run. Separately, Management predicts a potential replanting program of 500-1,000 ha, possibly to start in 2022-2023, while maintaining its average age of maximum 15 years and FFB yield of ~26.3 MT/ha, up until 2026. Another value proposition lies in its ESG plantation concept, in which it invested 5 years back: DSNG is in fact the first palm oil plantation to receive a "Green Loan".

Performance in 4Q20 and FY21

We estimate 4Q20 will be the biggest earnings contributor for FY20. Similar to other CPO players, CPO price inevitably exerts a lagging effect on DSNG earnings, on account of a 1-2-month shipment time to destination, meaning that high CPO price level in 3Q will only be partially recorded in 4Q. Not to mention CPO price uptrend is likely to continue in 4Q20. In our view, this trend will endure into 1Q21; thus, earnings performance should be ample during that period. We estimate overall FY21 financial performance will be underpinned by increasing sales volume, thanks to production recovery. GPM should improve as well, on the back of lower external FFB purchase. Note that DSNG GPM would perform higher than peers, on the back of better yield productivity per hectare.

We initiate coverage with **BUY** call recommendation

We like DSNG, mainly due to its remarkably better production outlook, compared to its peers. This will help the Company enjoy faster volume growth, coupled with lucrative CPO price trend, not to mention lower production costs. We initiate DSNG with a **BUY** call with TP of IDR660, using target PE of 18.2x (+1std 5-year) and Ev/Ha of USD 7,056. Interestingly, Company currently is traded at PE of 13.5x FY21, much lower compared to AALI and LSIP. The main pushback derives from its low liquidity situation.

DSNG competitive advantage

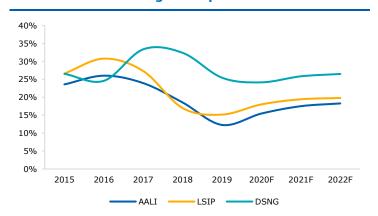

- We project Company to perform better sales growth trajectory than peers, backed by more superior volume growth, given higher productivity. Note that DSNG plantation profile currently consists of prime-aged trees, at an average of 11 years of age (vs. AALI and LSIP at 15 and 17 years old, respectively). Company also produces superior FFB yield as compared to peers, at 25.4MT/ha last year (vs. AALI at 19.5MT/ha and LSIP at 17.1MT/ha).
- Company also has higher gross margin than peers, mainly because of their lower cost per unit, driven by better yield productivity per hectare. Thus, earnings growth outlook should outperform industry, in our view. The greatest pushbacks may come from its low liquidity (average daily turnover only IDR2.0bn) as well as higher net gearing ratio compare to peers.
